The DNA is useful for production of the recombinant protein, which is a protein tyrosine phosphatase which may be involved in the growth and differentiation of osteoblasts and brain cells and is useful for identifying compounds that modulate PTP-OB activity and as a therapeutic agent for treating PTP-OH-related diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DNA encoding protein tyrosine phosphatase PTP-OB - isolated from human osteoblasts and useful for production of recombinant PTP-OB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  P-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (MERI ) MERCK & CO INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-DEC-1994;

                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                               529

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               linkers adapters were ligated to the blunt ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the psPORT1 vector. The ligated cDNA fragments were transformed into E.coli Electro- Max DH10B host ceils. This library was constructed in the laboratory of Dr. Lila Vodkin by Anu Khanna at the University of illinois at Urbana- Champaign. email: 1-vodkin@uluc.edu*a 46 c 65 g 146 t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         COMPLETE THE DEPORT; SITE_1: NOTI, SITE_2: SalI; This CONA library was constructed from mRNA isolated from full expanded leaves of greenhouse grown plants that were 2 weeks old. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a NotI restrictions site. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 1144584-1145351). Subtraction by Bento Soares and M. Fatima Bonaldo. pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ery Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Forward primer B9-131F and reverse primer B9-131R (see AAV31984) were used in RT-PCR assays of cDNA libraries of various human tissues to determine human Down syndrome-cell adhesion molecule DS-CAM (see AAV31981 and AAV31988) expression. The results demonstrated expression of human DS-CAM mRNA in foetal and adult brain, and foetal kidney. In addition, a breast carcinoma cell line showed expression of human DS-CAM mRNA. DS-CAM polypeptides (see AAW42086-87) are associated with developmental and neurological processes. The polypeptides and nucleic acids are used to developmental products for the detection, diagnosis and therapy of developmental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           developmental and neurological abnormalities
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 5; Page 79; 109pp; English

DS-CAM2 is a splice variant of membrane-bound DS-CAM1 (see AAW42086) and is deleted for the entire transmembrane domain. The DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome 21q22-2-22.3. The invention also provides murine DS-CAM partial sequences (see AAV31985-87), expression vectors and host cells, sequences (see AAV31985-87), expression vectors and primers useful transgenic animals, autisense oilgonucleotides, and primers useful for amplification of DS-CAM nucleic acid. DS-CAM polypeptides are associated with developmental and neurological processes. They can be used in e.g. neural prosthetic devices used in entubulation methods of repairing (reqenerating) damaged or severed peripheral nerves. The products can also be used in detection, diagnosis and the products can also be used in detection, diagnosis and the products can also be used in detection, diagnosis and the products can also be used in detection, diagnosis and the products can also be used in detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   neural cell adhesjon molecules. A modified direct cDNA selection technique was applied to bacterial and pl artificial chromosomes between ETS2 and MX1 by using cDNA from trisomy 21 human foetal brain. A unique cDNA fragment, designated E51 (see AAV31982), was obtained and used to screen a trisomy 21 human foetal brain (14-wk constitution).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      therapy of developmental and neurological abnormalities such as 
bown syndrome, mental retardation, holoprosencephaly, agenesis of 
the corpus callosum, or schizencephaly. Antisense oligonucleoti

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC gestation) cuba library. Further clones were obtained by exon CC (larapping. The complete DS-CAM1 cDNA sequence was deduced from CC (larapping. The complete DS-CAM1 cDNA sequence was deduced from CC overlapping clones. A splice variant cDNA (see AAV31988), encoding CC overlapping clones. A splice variant cDNA is a slow identified. The DS-CAM gene spans 900-1200 kb of genomic DNA and maps at chromosome CC 14022.2-22.3. The invention also provides murine DS-CAM partial CC sequences (see AAV31985-87), expression vectors and host cells, CC transgenic animals, antisense oligonucleotides, and primers useful CC for amplification of DS-CAM nucleic acid. D:-CAM polypeptides are CC associated with developmental and neurologic I processes. They can CC methods of repairing (regenerating) damaged or severed peripheral CC methods of repairing (regenerating) damaged or severed peripheral CC nerves. The products can also be used in detection, diagnosis and CC therapy of developmental and neurological abnormalities such as CC Down syndrome, mental retardation, holoprosencephaly, agenesis of CC the corpus callosum, or schizencephaly. Antisense oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel nucleic acid molecule (I) encoding a fructosyl transferase isolated from Aspergillus sydowi. The fructosyl transferase is useful for the production of polyfructose. Polyfructose can be used to manufacture surfactants, to increase the viscosity of an aqueous system, as a suspending agent, to accelerate sedimentation and in the formation of complexes or to bind water. The host cell can be used as a food. This sequence encodes the A. sydowi fructosyl transferase designated aff-SST which is described in the method of the invention.

```

A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 \*GS\* sequences given in AAR19001-726837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived.

Claim 1; Page 1203; 2245pp; Japanese

Identifying gene signatures in 3'-direct for diagnosis of abnormal cell function, reflects relative abundance of corresp.

3'-directed human cDNA library -function, by preparing cDNA that corresp. mRNA in specific human

e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO as for a part of the printed as the problem of the printed as the printed as the problem of the problem o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAI25968 standard;

                                                                                                                                                                                                                                                                                                                        The present invention relates to single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying expression in samples derived from human placenta. The probes are for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fire with from the country and the country and the country are considered.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO200157272-A2
                    The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                         (MOLE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 30-JAN-2001; 2001WO-US00663
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    326

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 ccagttctcaaaggagcag
                                                           The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the prob hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast particularly those diseases with polygenic aeticlogy. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and prognosing contractions.
                                                                                                                                                                                                                                                                                                                                                                                                        09-AUG-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic L. acids of determined algal, archaeal, bacterial, fungal and parasitical CC species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (1) CC obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the CC detection of at least one antimicrobial agent resistance gene or at CC ubiquitous detection and for identification of Streptococcus pneumoniae. CC (1) can be used to design a therapeutic age: which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Forberfacher archaea arching. Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Corynebacterium sp., Enterobacteriaceae group, Escherichia coll, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Weisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 24; Page 763; 1580pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bergeron MG, Bozsu
